

Increased Plume Height and Clean Air Dilution

The clean air stack is commonly used with FanAm's CBI and CBI JET fans.

The entrained clean air increases effective plume height and increases the air dilution drastically.

The stack's unique design also functions as a rain cap.

Our clean air stacks are manufactured from high grade PVC or Polypropylene that withstands highly corrosive environments.

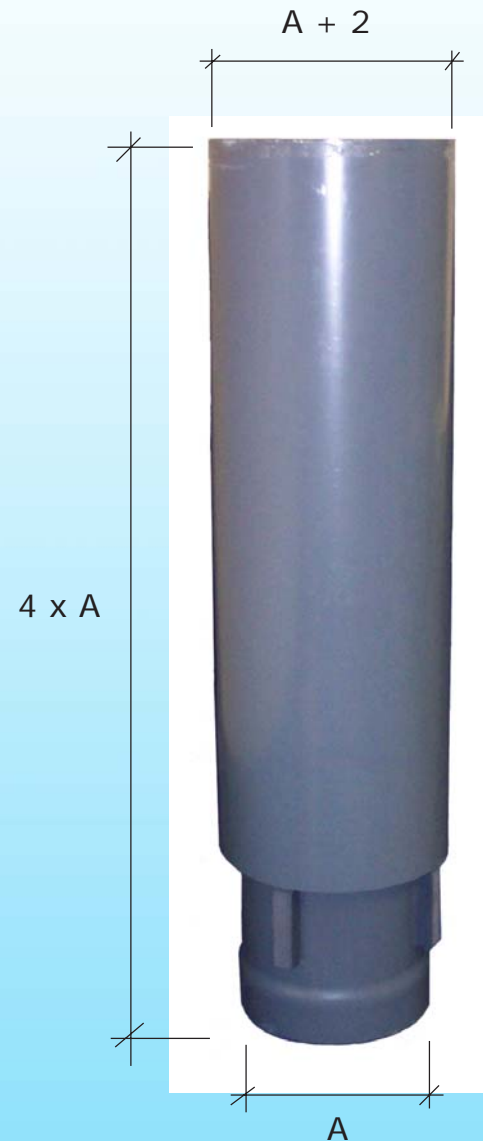

The installation process is very easy. The stack slips over the blower outlet and is secured with screws and/or adhesive.

If guy wire support is required, three (3) stainless steel eyelets are attached to the stack for guy wire connection.

*For customized stack height, please consult factory.

FEATURES:

- Rugged construction
- Weather-Proof
- Clean Air Entrusion
- Corrosion Resistant
- Increased Plume Height
- Guy wire support available
